

*"Power, Stability and Optional Double Reach™ make the Piggy Back® the most versatile sod delivery system available."*

# A delivery system that is beyond your expectations!

## the concept

Princeton has served the US sod industry with reliable, innovative solutions since 1972. Since 1979, the blue Princeton forklift has been the standard in heavy duty equipment for sod pickup and delivery. Princeton now offers a wide range of solutions for the sod industry. Whether you are looking for a unit that is light weight, heavy duty, able to handle big rolls or is equipped with a push off system, we have a unit available that is tailored for your specific needs.

The EZ Hitch mounting system, introduced in 1995, takes all pressure of the mast and hydraulic system. It is also much faster than the old system, a unit is ready for operation in less than 60 seconds. A standard dual stage, 86" mast was introduced in 1998. The 10' mast for handling big rolls is also dual stage. Princeton's current line of units are the most reliable ever.

## the machine

### Z2-3

The Z2-3 is the lighter weight, 3 wheel drive solution for handling sod. The 4,000lb capacity version weighs 4,200lb, and is equipped with 29" tires. It's full time, all wheel drive makes it very suitable for off road conditions. The wide rear tire prevents the grooving effect. The Z2-3 is equipped with a scissors reach. When there is enough clearance for the front tires underneath the truck, it enables one-side unloading.

### D45

The most tested and proven concept in sod handling. The current D45 is the most reliable unit ever built by Princeton. It's 2WD skid steer, rugged design, center seating, ROPS certified overhead guard and legendary Princeton resale value make it one of the most popular units for sod handling. It is standard equipped with a dual stage mast and 4 cylinder, 60HP Deutz engine.
